

## COMMUNICATING HAS NEVER BEEN SO EASY

QuickLink is reliable wireless messaging software that allows users to instantly send text messages to any wireless device, mobile phone, PDA or pager. With little effort, QuickLink integrates with other applications to serve as the messaging component. QuickLink then alerts key personnel of network failures so systems can be quickly restored and brought back ASAP.

### WHO USES QUICKLINK?

QuickLink is the ideal messaging software for a small company that needs a reliable method of communicating to mobile workers' wireless devices. Though it can be used with virtually any company in any industry, the QuickLink solution has been proven useful in:

- Emergency Dispatch Centers
- Couriers
- Field Service – Vending, Computer Repair, Electric, HVAC
- Healthcare Facilities, On-Call Nurse and Physician groups
- Mortgage and Finance companies

### FEATURES

**Multiple Devices and Protocols Supported** – QuickLink supports alphanumeric and numeric pagers, one-way wireless devices, mobile phones, and PDAs such as Blackberry. QuickLink uses wireless protocols such as TAP, SMTP, WCTP, SNPP, GSM and HTTP to provide connections to virtually any wireless carrier.

**Quick Message Send** – QuickLink can send messages to a single receiver or to a group of receivers. Administrators can pick up receivers and groups from a Favorites list in a convenient alphabetical order.

**Reports** – Messages can be viewed, sorted, and filtered by users or message status. Messages are always accounted for.

**Powerful Graphical User Interface** – QuickLink provides a browser-based user interface for desktop senders, making message sending easy. It's truly just a matter of pointing and clicking, and your message is sent.

**QuickLink Monitor** – A convenient process that periodically checks the status of the QuickLink server – should a message fail as a result of for example, a downed paging service, QuickLink will send an immediate alert to the administrator. The QuickLink Monitor also cleans log files and queues to minimize use of disk space.

**Security** – QuickLink offers secure access permissions, and can be deployed on a corporate intranet, behind a firewall, or on the open World Wide Web.

**Intuitive GUI Administration –**  
Every administrative function can be performed on the GUI. QuickLink eliminates the need for complex file manipulation and configuration file editing.

**Reports –** QuickLink keeps track of every message sent and provide information on status, send time, receiver, and more.

**Log Files –** Comprehensive log files are available for QuickLink so administrators can troubleshoot message delivery and system operations.

#### **PLATFORMS SUPPORTED**

##### Server and Client Platforms

- Windows NT

##### Client Only Platforms

- GUI: any other browser enabled platform
- Software: any Java capable platform

##### Supported Wireless Protocols

- SNPP one-way
- TAP over leased line
- TAP dial-up
