

HipLink Features for BlackBerry®

To provide maximum flexibility and optimum use of BlackBerry smartphones, HipLink Software has created a host of new features. These features include special tools for sending and receiving of alerts and notifications anywhere, anytime.

Persistent Alerts - Encrypted SMS - Enterprise Protocols

DEDICATED INBOX APPLICATION

A secure, private inbox for HipLink messages separate from other SMS or emails. Features include:

- One-way or Two-way alerting
- One-click response based on custom commands
- Set different alert settings for HipLink messages
- Ability for sender to override device settings for high-priority messages
- Persistent Emergency Alerts that remain invoked until the owner interacts with his/her device
- Auto Message Expiration allows automatic message deletions

MOBILE CLIENT APPLICATION

HipLink user can perform standard actions or execute custom actions and commands specific to their organization from the mobile client.

- Send messages both standard and encrypted
- Query the status of messages
- Confirm a received message
- Execute custom response actions
- Full Administration and Management Controls such as saving draft messages, querying recipient names, and favorites list
- Streamlined workflow offers more efficient, smaller workflows for all tasks
- Screens are well-defined and highly intuitive

ENCRYPTED SMS

Messages can be sent fully secure using 256-bit encryption using SNPP or BES and the HipLink client will decrypt and display the contents.

ENTERPRISE PROTOCOLS

HipLink BlackBerry application supports all wireless carriers and enterprise messaging protocols including BES push, SNPP and WCTP protocols.

WI-FI SUPPORT

Support of Wi-Fi-enabled BlackBerry smartphones

HipLink Software is a member of the BlackBerry Alliance Program
